

2020–2021 ACADEMIC YEAR

GRADE 9 PHYSICS PROJECT

NAME OF THE PROJECT: DESIGN YOUR LUNCH BOX

NAME, SURNAME OF THE STUDENT :

CLASS :

| Grade | Content | Acquisition | Duration | Assessment |
|-------|---|---|---------------|------------------------------|
| 9 | Applying Scientific method to a daily life observation; “Design Your Lunch Box” | Develop skills for making scientific inquiries. | Academic year | Research & Experiment Rubric |

Dear student;

In this Project, you are expected to apply scientific method to a daily life observation; “Design Your Lunch Box.”

Imagine you are preparing to go to school in a cold winter day. You want to have a lunch at lunch break. You have hot meal with you in your lunch box. You want your meal to keep hot until lunch break. Which material should be used to construct lunch box to keep you meal hot?

Design and perform an experiment to determine the cooling curve of hot drink or meal in lunch box of various materials and shapes.

Determine your choice and design your own lunch box.
Enjoy your meal!

You should follow the following steps;

- A. Research**
- B. Experimentation**
- C. Experiment report**

A. Research:

Determine the subtitles; in this case, they could be “How can some materials keep foods hot.”, etc.

Determine the relevant parameters: What could be the relevant parameters; hot food like soup, shape of box, type of box, etc.

B. Experimentation:

After determining relevant parameters, form a testable hypothesis for one of the parameters such as “Cardboard box keeps meals hot longer than the other ones.” (Do not use this hypothesis, this is only an example.)

Determine the independent, dependent and the controlled variables. For the above hypothesis, controlled variables should be the shape, type of hot meal or drink and its degree in celsius, shape of box, size of box. You should choose it according to your own hypothesis.

Design a method to test your hypothesis, determine the apparatus to be used, draw the details of the mechanism.

Collect data, form a data table accordingly.

Evaluate the validity of the hypothesis based on your data.

Suggest improvements to further inquiry.

C. Experiment Report:

Title: * a brief, concise, yet descriptive title.

Statement of the Problem:

* What question(s) are you trying to answer?

* Include any preliminary observations or background information about the subject.

Hypothesis:

* Write a possible solution for the problem.

* Make sure this possible solution is a complete sentence.

* Make sure the statement is testable, an if-then statement is recommended to illustrate what criteria will support your hypothesis (and what data would not support the hypothesis).

Materials:

* Make a list of all items used in the lab. Alternatively, materials can be included as part of the procedure.

Procedure:

* Write a paragraph (complete sentences) which explains what you did in the lab as a short summary.

* Add details (step-by-step) of your procedure in such a way that anyone else could repeat the experiment.

Results (Data):

* This section should include any data tables, observations, or additional notes you make during the lab.

- * You may attach a separate sheet(s) if necessary.
- * All tables, graphs and charts should be labeled appropriately.

Conclusions:

- * Accept or reject your hypothesis.
- * EXPLAIN why you accepted or rejected your hypothesis using data from the lab.
- * Include a summary of the data - averages, highest, lowest..etc to help the reader understand your results. Try not to copy your data here, you should summarize and reference KEY information.
- * List one thing you learned and describe how it applies to a real-life situation.
- * Discuss possible errors that could have occurred in the collection of the data (experimental errors)

You should present your teacher the following at the end of your entire work;

- 1) Research paper containing a cover paper, research of the subtitles, introduction, body, conclusion, quotation, footnote, references.
- 2) Experiment report.

FIRST CHECK: (Planning)

Do your research and determine relevant parameters.

SECOND CHECK: (Draft)

Do your experiment, write down a draft report.

SUGGESTIONS:

Be careful about keeping all other variables constant when testing the dependent variable.
